Check the Autodesk forum at AutoCAD Help and Support FAQs Q: What are AutoCAD's drawing and editing options? A: Like other 2D-CAD packages, AutoCAD has a powerful and flexible list of drawing options. These are grouped by categories such as line, primitive (spline, polyline), color, edge, and appearance. The best way to learn the latest AutoCAD features is to try the various tools and view them in action. For example, use the Line tool to draw a simple vertical line on the screen and then switch to the Primitive tool to draw a single horizontal line. Close the tool, and then move the cursor and click with the left mouse button to draw a polyline. To view the options in detail, use the Properties palette. Q: What is an intelligent object? A: An intelligent object is a drawing component that maintains its own geometric and topological properties when the user edits the properties of the object. For example, with a line, a spline, or a polyline, the line becomes a wireframe when closed. A primitive is just that. There are other types of intelligent objects, but this article will use the line, spline, and polyline as examples. Q: What are the various drawing tools available in AutoCAD? A: There are seven standard drawing tools and a few special tools. The standard tools are the Line, Polyline, Arc, Arc Text, Miter, Miter Text, Circular, and Miter Circular. The special tools are the WordArt, Spline, Sect, and Alloc. Drawing a simple line, using the Line tool: Left click anywhere on the screen to start. The San Francisco Planning Commission voted on Thursday, Feb. 20, to approve the use of the Keystone Boulevard site for a three-story building with a 15,000-square-foot retail space, 36,000 square feet of office space and 30,000 square feet of commercial space. In the new plan, the city's Bureau of Engineering and San Francisco Public Utilities Commission propose to use Keystone to handle municipal services, such as water and sanitary sewer lines and electrical transmission, while diverting the rest of the project's 30 million gallons of water from the city's water system. "We have a responsibility to provide services that are needed to sustain our communities, and if we can't provide those services, we have to look elsewhere to get them," said Sam Jacobson, a planner for the San Francisco Public Utilities Commission. The new plan will have to win approval from the board of supervisors, the San Francisco Municipal Transportation Agency and the San Francisco Public Utilities Commission, Jacobson said. The city is expected to receive the results of the environmental impact report for the new plan in February or March and
