1. Field of the Invention The present invention relates to a display device and a method of driving the display device, and more particularly, to a display device including display pixels that are formed using polysilicon and a method of driving the display device.

2. Description of the Related Art Among various flat panel displays (FPDs), organic light-emitting diode (OLED) display devices have a self-emitting characteristic and have low power consumption, a lightweight design, wide viewing angle, and a high response speed. Since OLEDs are current-controlled elements, the OLEDs can be operated at a low voltage. In addition,

---

since OLEDs are based on a principle in which an organic material is re-combined and is emitted, the brightness can be controlled by adjusting the amount of current. In addition, a structure of an OLED can be formed as a two-dimensional (2D) matrix structure using glass substrate, or can be formed as a three-dimensional (3D) matrix structure in which OLEDs are driven by pixels arranged in a direction in which the OLEDs overlap each other, i.e., in a vertical direction. In an organic light-emitting display (OLED) device, when a scanning signal is applied to one electrode line

Like Google, Bing and Yahoo! Search, you can also use our Phone Numbers Web Extractor to gather and export phone numbers from websites. Simply choose from the drop-down menu what search engine you would like to use, then enter the URL of the webpage you would like to extract phone numbers from. Next, click Search and go through the results of your search query. All phone numbers and their associated details will be displayed in a tabbed interface. You can either choose to export all the phone numbers to a CSV or TXT file, or just the ones you would like to keep. If you need

---

to look up phone numbers, and especially if you want to find them with pinpoint accuracy, Phone Numbers Web Extractor is your go-to application. It's not only a good alternative to the big search engines but also for offline browsing. For example, we can download the phone numbers from a online listing or the phone directory app on our mobile device. Intuitive design makes it easy to use The interface is pretty well-organized, and won't take much of your time with accommodation. The center area is where all gathered numbers are displayed along with info like source, the number itself, as well as the type. A side panel holds major functions to initiate the process and export data. Two methods can be used,

---

separated by tabs that bring up a few corresponding options. If you're looking for a specific type of numbers but don't know exactly where, the first method can shed some light. It's based on custom keywords that are looked up in popular search engines like Bing, Yahoo and Google, with the possibility to add your own. The process is simple and only requires you to create a list of words to look up and initiate the search. Search on websites and generate reports A similar approach is used by the second method. However, this time you need to write down the whole URL, but you're not limited to a single one. For more variety, the application lets you specify whether to search just the given page, outside links,

---

as well as all links in the specific domain. The list of sources can be saved to file, with options to import from the same format, such as CSV or TXT. You might want to take the time and go through the set of configurations before putting the process in motion. These aren't abundant, with options to add custom filters for Fax and telephone tags, so the application knows what to look for. What's more, it can
